Pollutant	Units of measure	Monitoring frequency required by licence	100 percentile limit	Exceedance Date	Value	Five-day cumulative rainfall recorded on site (mm) (Note 1)
Total suspended solids	mg/L (Note 2)	Daily during any discharge	50	1/07/2019	62	5

Total suspended solids	mg/L (Note 2)	Daily during any discharge	50	7/07/2019	91	21
Explanatory Notes	(Note 1) mm (millimetres) (Note 2) mg/L (milligrams per litre) (Note 3) In the previous month, water was retained in the lower western sediment basin (i.e. EPA 21) due to insufficient water available for reuse in dust suppression. In addition to this, the western basin was being used to treat runoff from intermittent minor rainfall events occurring in the previous month. Hence the lower western basin overflowed in the early days of July, when total suspended solids exceedance was recorded. KEE will continue to maintain sediment basins in low flow periods to prepare for impending rainfall. This includes supplementing stormwater with town water as required for dust suppression activities. KEE perform daily inspections of sediment controls and proactively maintain controls by all means practicable to ensure potential for suspended solids discharge is minimised.
