Total Suspended Solids	mg/L (Note 2)	Daily during any discharge	50	10/02/2023	140	40.5 (Note 3)		
Total Suspended Solids	mg/L (Note 2)	Daily during any discharge	50	15/02/2023	65	55.00 (Note 3)		
Explanatory Notes	(Note 1) mm (millimetres) (Note 2) mg/L (milligrams per litre) (Note 3) While the 5-day cumulative rainfall at the time of exceedances on 10th and 15th February 2023 did not meet the five-day duration 90th percentile rainfall event allowance for discharge (being 62.1mm), the results are attributable to the western basins (EPA 21 and EPA 1) being used to treat runoff from intermittent rainfall that occurred in the days leading up to the exceedance events. During the process of preparing the western basins in readiness for further rainfall on 10th and 15th February 2023, rainfall occurred which caused the basins to overflow. Kimbriki performs daily inspections of sediment controls and proactively maintain controls by all means practical to ensure potential for suspended solids discharge is minimised. Kimbriki will also reduce the potential for discharging elevated suspended solids by constructing an up-gradient clean water diversion system which will significantly reduce the stormwater catchment of the western basins and reduce the volume of sediment-laden water to be treated on site (construction is planned for completion before end of 2023).
