

# Compost in a Bottle Experiment

This experiment will show you how food scraps and garden waste breaks down (**decomposes**) and how long it takes. You will need to observe what is happening to the material in your bottle each week. Maybe take some photos to record the changes.

## Prediction

What do you think will happen to the different materials?

## Observe

What did happen each week?

Week 1	
Week 2	
Week 3	

## Explain

Explain why you think this happened to the material over time.
